You are creating a 3-page website with screenshots of the pages available in the folder. It is named home, about, and contact. All the pages have a navbar and footer. The navbar must be fixed.

Each of the pages is saved in the order in which the pages should appear, also the pages are also numbered in the way the contents would appear on the page. E.g home1 consists of the navbar and the hero image, home2 is the segment below home1 but on the same page, same with home3 till it gets to the end of the home page which is a footer. Same applies to the remaining pages.

You are allowed to be creative with the designs but it is important you implement the designs given.

Best of Luck
